## About Me

A developer passionate about creating and learning new skills to do so. Experienced in full stack development after receiving an education background in business management and wanting to make a transition into web development.

## EDUCATION —

**UNCC Coding  
Bootcamp**  
2019

**CPCC Business  
Management  
Associates Degree**  
2018

## SKILLS —

### Technologies

HTML

CSS

Javascript

Node

Express

Adobe Suite

Git

### Frameworks/Libraries

React/Redux

jQuery

Material UI

Bootstrap

### Database

MYSQL

MongoDB

## EXPERIENCE

### Streets

([Code](#) | [Demo](#))

Created and developed a full stack, multipurpose app intended to find local musicians in any city using SoundCloud's API, in addition to find local shows using Ticketmaster's API and discover new releases with Spotify's API.

- Developed a mobile responsive frontend with React, Material UI & React-Router-Dom
- Added a MySQL database in order to save Spotify API results
- Utilized both backend and frontend API calls based on user input

### Home Depot Rental

([Code](#) | [Demo](#))

Recognized Home Depot's current issue of only allowing customers to secure a tool for rental in store as opposed to giving customers an option to do so online as well and created an E-commerce solution. By creating a website capable of making rental purchases online customers will no longer have to rush and worry about if a tool will be in store by the time they need it.

- Utilizes React Bootstrap for a responsive and engaging frontend
- Redux and React Router is implemented to carry state over to multiple pages

### Sumer Tailoring

([Code](#) | [Demo](#))

Created a website for a tailoring business in Charlotte after realizing their current site in the company's social media bio was linked to an expired page and no longer active.

- Took initiative in reaching out to the company to make them aware the site potential customer want to access is no longer live
- Used React and Material UI frameworks for the frontend, along with CSS media queries and animations to create a more appealing and user friendly design

## Corner Store Clothing Brand

([Code](#) | [Demo](#))

Designed an HTML promotional email tested with PutsMail for responsiveness across 50+ different platforms and devices.

- *HTML & Inline-CSS to code*
- *Used Adobe Photoshop for picture editing & design*
- *Tested with PutsMail to ensure it works through real emails*

## Seaside Seafood

([Code](#) | [Demo](#))

A single page website for a restaurant showcasing about them, a menu, operation hours and contact information.

- *Made with React & Materialize*
- *Features CSS animations & media queries*
- *Designed to be responsive*
